

Are Pets Harming Your Health -Purify Home Air.

If you own a pet, or are thinking of owning a pet, you need to know how pet dander can affect your family and friends. Many people suffer from pet dander sensitivity. Pet dander can spur asthma and other breathing problems, but can be removed when you **purify home air**.

Pet dander is one of the most volatile substances for causing allergies and asthma. **Purify home air** to remove harmful pet dander to protect your friends and family. Different breeds of cats and dogs can produce various amounts of dander. Pet dander cannot be seen and can be hard to eliminate. According to WebMD, every single home in the U.S. has detectable traces of pet dander, whether a pet lives in the home or not. [WebMD](#) also says that 72% of American households have at least one cat or dog. In other words, if you are living in an apartment then the odds are that one or more of your close neighbors has a pet. So, whether you own a pet or not, you might be living with harmful pet dander which can cause asthma, allergies, or other respiratory issues.

Are You at Risk?

Even if you do not own a pet, and do not intend to own a pet, your home can still be infested with pet dander! Pet dander has a tendency to not only float through the air; it also can adhere to surfaces, such as clothing, and travel into your pet-less home. Pet dander is also stubborn. It can stay inside a home for up to six months after the pet is removed, and maybe even longer if the home is carpeted.

Opening windows to air out a home still isn't enough because the dander can travel through the fresh air and right into your open windows. In fact pet dander is so small that it can actually float in mid-air before finally settling onto furniture or other items in the home. Luckily you can remove pet dander, which can cause asthma, when you **purify home air**.

Protect Your Friends and Family

Whether or not you suffer from pet allergies personally, keep in mind that young children and older adults can be more susceptible to dander sensitivity. You also may find out the hard way that your friends are allergic to your pets. Think about how embarrassing it would be if you invited a group of friends over for a dinner party, only for them to experience swelling, itching, and sniffing instead of having fun. Asthma sufferers are very sensitive to pet dander, which can unfortunately cause asthma attacks.

You can protect your guests by investing in a good system to **purify home air** which can remove harmful pet dander that causes allergies and asthma. Cleaning is typically not enough to remove pet dander. Dusting and vacuuming can kick the dander back up into the air. This creates a vicious cycle, but luckily there is something you can do. When you **purify home air** you can remove the pet dander from the air that you breathe in your home.
