

PureAox Company, established in 2018, is dedicated to developing technological solutions for various challenges by enhancing existing products through a unique manufacturing process for alumina as an effective adsorbent, replacing activated carbon, and incorporating cold plasma technology. In 2019, the company collaborated with scientific experts to address the country's fundamental communication needs, resulting in the design and invention of a range of products utilizing spherical alumina absorbers and plasma technology. These innovative products have been successfully provided to various centers.

In 2021, with the arrival of the Corona epidemic and the challenge that arose, the company saw its role in designing and manufacturing modern air purification and disinfection technology and finally succeeded in localizing the active plasma filter technology in Iran and as a startup for the Canada . Until now, PureAox Plasma has succeeded in providing air purification and disinfection products with a problem-solving approach to a wide range of institutions, including government bodies, private and medical centers.

### **Perspective**
